

Student Enrollment & Course Management System (SECMS)

Phase 1 – Brainstorming & Ideation
Built on the Salesforce Platform

Project	Details
Project Name	Student Enrollment & Course Management System (SECMS)
Platform	Salesforce (Lightning Experience, Developer Edition)
Domain	Education / College Administration
Team Member	Member 1: Vasanthakumar R Team Lead Member 2: Saravanan V Member 3: Syed Kutbudeen S Member 4: Raji P Member 5: Sriram S
Phase	1 of 8 – Brainstorming & Ideation

1. Problem Statement

Colleges still manage student enrollment, course allocation, instructor assignment and fee payments through paper forms, spreadsheets and disconnected tools. This causes duplicate records, manual errors, delayed approvals, no real-time view of course seats, and difficulty in tracking payments and reports. Administrators spend more time on data entry than on decisions.

2. Objectives

- Create one centralized system for Students, Courses, Instructors, Enrollments and Payments.
- Enforce data accuracy using validation rules and required fields.
- Automate repetitive work such as status updates and notifications using Salesforce Flow.
- Add an approval process so that enrollments are reviewed before confirmation.
- Give management real-time insight through reports and dashboards.
- Protect data with role-based security (profiles, permission sets).

3. Empathy Map

Stakeholder	Thinks & Feels	Says & Does	Pain Points	Gains
Student	Wants quick, easy enrollment	Fills forms, visits office repeatedly	Long queues, unclear status	Fast enrollment, clear status
Administrator	Overloaded with paperwork	Enters data manually, cross-checks sheets	Duplicates, errors, delays	Single source of truth
Instructor	Needs accurate class lists	Asks office for student lists	Outdated lists	Live course-wise student list
Management / HOD	Needs data for decisions	Requests periodic reports	Reports built manually	Instant dashboards

4. Brainstorming – Ideas Considered

#	Idea	Decision
1	Excel-based tracking with shared sheets	Rejected – no automation, no security
2	Custom web app built from scratch	Rejected – high development time and cost
3	Salesforce custom app with objects, flows, approvals and dashboards	Selected – low-code, secure, scalable

4	Add-ons: email alerts, payment tracking, seat availability check	Selected as enhancements
---	--	--------------------------

5. Proposed Solution

SECMS is a Salesforce Lightning app that manages the complete enrollment life cycle – from student registration to course selection, approval and payment – in one place.

- **Custom objects:** Student, Course, Instructor, Enrollment, Payment.
- **Relationships:** Lookup and Master-Detail links between Student, Course and Enrollment.
- **Validation rules:** Prevent invalid or incomplete data.
- **Approval process:** Enrollment review and approval by the administrator.
- **Flow automation:** Auto status update and notifications.
- **Reports & dashboards:** Enrollment counts, course-wise students, payment status.
- **Security:** Profiles, roles and permission sets.

6. Key Features

Feature	Benefit
Centralized student and course records	No duplicate or scattered data
Automated enrollment workflow	Less manual work, faster processing
Approval process	Controlled and auditable enrollment
Payment tracking	Clear view of paid and pending fees
Dashboards	Real-time decisions for management

7. Expected Outcomes

- Faster and error-free enrollment process.
- Reduced paperwork and manual effort.
- Real-time visibility of enrollments, seats and payments.
- Secure, role-based access to student data.
